

THE SYMMETRY GROUPS OF LIGHT:
THE PERFECT SYMMETRY OF A LIGHT-ONLY UNIVERSE
COMPARE WITH ASYMMETRY OF MATERIAL UNIVERSE: (Fig. 7)

John A. Gowan and August T. Jaccaci

March/April, 2013

A "Tetrahedron Model" of a Light Universe
(no symmetry-breaking by the weak force)

A symmetry group consisting only of light (electromagnetic radiation (EM)), virtual particle-antiparticle pairs, matter-antimatter annihilations, and a symmetric spatial metric (gauged by the electromagnetic constant "c") with no gravitational/temporal "warping."
